

Interfacing Risk And Earned Value Management 1

Sound risk management process and robust earned value management (evm) application each offer the opportunity to improve project control and provide the project manager with reliable information on which to base proactive management decisions. Interfacing risk and earned value management standing of how project management planning, monitoring and control can be improved through the integration of the two process. This guide identifies the added value achievable when evm and rm are combined in a project context (see appendix b). It does not attempt to abstract sound risk management processes and robust earned value management application each offer the opportunity to improve project control and provide the project manager with reliable information on which to base proactive management decisions. Risk management and earned value management are both used to improve project decision-making and control, but they are rarely used together. In this presentation David Hillson offers practical project management is sometimes compartmentalised into its discrete elements – product decomposition, planning, scheduling, cost estimating, requirements management, risk management and performance techniques such as earned value management. This guide looks at the benefits of looking at project management techniques as a cohesive whole. David Hillson, the Risk Doctor, explains how earned value management (evm) and risk management can be used together to improve project decision-making and control. Presented in Lisbon Portugal as

interfacing risk and earned value management risk earned value. and revise the and schedule . responses . 1.3 & 1.6 develop top-down budget . describe cost and schedule uncertainty (using 3-point estimates); revise td budget and schedule to take account of risk . 1.12 approve the project baseline processes to derive this management reserve appropriately through rigorous risk identification and analysis. the metrics used to gauge the success of applying a project rm process, whether for threat reduction or opportunity enhancement, are usually interfacing risk and earned value management.
