

The Life Of The Bee

In an exuberantly poetic work that is less about bees and more about life, maurice maeterlinck expresses his philosophy of the human condition. the renowned belgian poet and dramatist offers brilliant proof in this, his most popular work, that "no living creature, not even man, has achieved in the center of his sphere, what the bee has achieved."essentially "life of a bee" is a study of the social aspects of the hive. borrowing liberally from other sources maeterlinck weaves a masterful narrative around the cycles of life that exist in the natural world. like most of his work, there is an underlying deep feeling of philosophical symbolism and harmonye life of the bee, maurice maeterlinck, 1901the life of the bee. an enthusiastic and expert beekeeper, maeterlinck did not intend to write a scientific treatise, even though he details such topics as the mathematically accurate construction of the hive, the division of labor among community members, the life of the young queen and her miraculous nuptial flight,the life of the bee quotes showing 1-3 of 3 "if the bee disappeared off the face of the earth, man would only have four years left to live." — maurice maeterlinck, the life of the beethe queen bee is larger than the other bees. she is about 18 to 22 mm long (about 3/4 of an inch) and weighs about 200 mg (about /150 of an ounce). most of the bees in a hive are the female worker bees which are 12-15 mm long and weigh about 100 mg. drones, the male bees, are a little bit larger than worker bees,

one of the most curious of books that have appeared in many months is "the life of the bee," by maurice maeterlinck. from one point of view it is a nature book--a conscientious and intimate study of bee life, showing not only diligent reading, but dose personal observation.a honey bee's life cycle consists of three stages: the larval stage, the pupal stage and the adult stage. collectively, this is known as complete metamorphosis because the form of the bee changes drastically from the larva to the adulte life span of a honey bee colony depends upon the survival of a variety of bees within it. if only the queen lives, for instance, a colony cannot survive, as she cannot produce honey or pollinate flowers on her own. a honey bee colony is an organized society of three adult castes: queens, workers and droneslony life. unlike a bumble bee colony or a paper wasp colony, the life of a honey bee colony is perennial. the three types of honey bees in a hive are: queens (egg-producers), workers (non-reproducing females), and drones (males whose main duty is to find and mate with a queen). honey bees hatch from eggs in three to four days.
